

Dear Verasonics Customer,

I am happy to announce the next Vantage System Training Class, and would like to invite you and/or your colleagues to join us for this event.

This class will take place at our office in Kirkland, Washington on Thursday and Friday, September 13 and 14, 2018.

Vantage System Training is intended primarily for new users, to help you become familiar with the system programming and trouble-shooting, and to provide a comprehensive overview of controlling the Vantage system. It is also beneficial for experienced customers who wish to enhance their understanding of the software interface and script development. We will introduce users to the many tool kits and example scripts provided in the Vantage software. We will include short practical exercise sessions using the Verasonics Simulation software installed on the attendee's portable computer, and will have a Vantage hardware system available for demonstrations, in an informal, interactive session. Some time will be available for personal assistance with custom applications.

There is no cost to Verasonics customers who own systems that are covered under warranty or Service Level Agreement/Extended Warranty, however you are responsible for your travel and accommodations. Verasonics will provide lunch and refreshments during the day. When you confirm your attendance we will send you information about the training program, hotel options, and recommended preparation.

Due to space constraints we are limited to 2 people from each institution. Please respond at your earliest convenience by email to [mikevega@verasonics.com](mailto:mikevega@verasonics.com) and let me know how many people from your lab will attend.

Best regards,

Lauren Pflugrath, CEO  
Verasonics, Inc.

**If you would like to attend the training, please contact  
MKC Korea first.**
